DETAILED ACTION

1. The rejection of claims 2 and 3 under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention is withdrawn.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuji et al., U.S. Patent No. 7,396,865 (hereinafter "Tsuji"). Tsuji teaches an oxygen absorber and diene based polymer or cyclic olefin polymer. See Tsuji, col. 4, lines 3-65. The Tsuji patent is entitled to the JULY 22, 2004 date of the continuation application PCT/JP2004?0140402 according to 35 USC 365. Although Tsuji does not disclose a cyclic polymer containing a diene monomer, Tsuji makes it clear that polymers can be prepared with norbornene/ethylene. To one of ordinary skill in the art norbornene can be copolymerized with butadiene in a cyclic fashion based on the teach of copolymerizing norbornone with ethylene. See Tsuji, col. 5, lines 12-39.

5. Claims 2-10 are objected to for depending on a rejected base claim.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert D. Harlan whose telephone number is (571) 272-1102. The examiner can normally be reached on Mon-Thu, 10 AM - 8 PM.
